

A peer-reviewed open-access journal

BioRisk

Biodiversity & Ecosystem Risk Assessment

Chief: Dr [Josef Settele](#), Helmholtz Centre for Environmental Research – UFZ, Germany. **Managing Editor:** Dr [Lyubomir Penev](#), Pensoft Publishers, Bulgaria. **Editorial Office:** Pensoft Publishers, Geo Milev Street 13a, 1111 Sofia, Bulgaria; Tel: +359-2-8704281, Fax: +359-2-8704282, Email: [biorisk@pensoft.net](mailto: biorisk@pensoft.net), www.pensoft.net/journals/biorisk

Released on 14th of January 2011

Fast, Linked, and Open Access – Invitation to publish in BioRisk

The journal **BioRisk** (www.pensoft.net/journals/biorisk) was established in the framework of the ALARM FP6 project to provide a publication venue for high quality manuscripts in ecology and biodiversity science with no restrictions on manuscript's size or color. The journal has published 5 issues, among them the [Climatic Risk Atlas of European Butterflies](#) (downloaded more than 30,000 times from both journal's and UFZ's servers!) and the 1000-pages treatise [Alien Terrestrial Invertebrates of Europe](#).

BioRisk is extremely appropriate for publishing FP projects results either as regular research papers or in a form of special issues, conference proceedings, thematic collections of papers, monographs, data publications and so on.

BioRisk builds upon the tremendous success of its sister journals ZooKeys (www.zookeys.org), and PhytoKeys (www.phytokeys.com) and offers numerous innovative ways to publish and disseminate information in ecology and biodiversity science. **BioRisk** has an [editorial team](#) of highly renowned specialists in the field. All papers are open access and free to read, download, print, and distribute.

BioRisk is more than a journal. Starting with next issue, **BioRisk** will become a linked environment built upon its own content management software. Linking is provided at the internal level (within an article, within the journal, or within the publishing platform of Pensoft) and to external resources (Global Biodiversity Information Facility, Encyclopedia of Life, Biodiversity Heritage Library, PubMed and PubMedCentral, Morphbank, International Plant Names Index, Tropicos, The Gymnosperm Database, ZooBank, Wikipedia, Wikispecies, etc.) through a dynamic web profile of each taxon mentioned within a paper (www.ptp.pensoft.eu). Geo-referenced localities can be mapped within taxon treatments or for the entire paper. The journal can be followed on [Twitter](#), [Facebook](#), [Mendeley](#), and other social networks.

BioRisk will be published in four different formats: (1) high-resolution, full-color print version (2) PDF identical to the printed version; (3) HTML to provide links to external resources and semantic enhancements to published texts for interactive reading; (4) XML version compatible to PubMedCentral archiving, thus providing a machine-readable copy to facilitate future data mining. Neither restriction nor charges are imposed on the use of colour illustrations.

The open access fees will be **waived for all submissions published in the next four regular issues of BioRisk**. Publishing of special issues (monographs, conference proceedings, Festschrift volumes, thematic collections of papers, etc.) is negotiable. The standard fee is 200€/paper up to 10 pages and 20€/ per additional page. All papers published in the next issues will be later ISI covered and will have an Impact factor when the journal receives it. In this way, we would like to offer everyone the chance to test the efficiency and innovative approach to publication and distribution of information in ecology and biodiversity science in **BioRisk**!

We welcome manuscript submissions from you and your colleagues!

Josef Settele (Editor in Chief) and Lyubomir Penev (Managing Editor)
